

VARDAN

ENTERPRISE

BUSINESS PROFILE

"ONE-STOP SOLUTIONS FOR
BUILDING MATERIAL AND STEEL STRUCTURE"

About Us

More About VARDAN ENTERPRISE

At **VARDAN ENTERPRISE**, we bring you a wide range of products from various sectors, Such as government, civil construction, energy, metal, or agricultural industry, we have meticulously selected trusted manufacturers to provide you with quality products.

Our commitment to quality and reliability ensures that you receive superior products that meet your construction needs. Explore our catalog and make the right choice for your next project.

Our Mission

Committed to Exceeding Expectations

At Vardan Enterprise, in collaboration with our associate groups, we are driven by an unwavering determination to fulfill our commitments to the highest standards. This dedication has made our products and services highly demand by individual as well as construction companies. We take immense pride in the invaluable expertise and extensive experience we have accumulated in this field over time.

Our Vision

Bringing Quality and Accessibility to All

We are dedicated to making our exceptional products and services available in every corner of the nation. Through our widespread reach, we aim to empower individuals and communities.

**Join us on our journey to make a commendable difference.
Together, we can build a brighter future for all.**

CEMENT

Cement is a binding material used in construction that is primarily responsible for holding various components of a structure together. It is a fine powder made from a mixture of materials, including limestone, clay, shells, and silica sand. The process of manufacturing cement involves crushing, grinding, heating, and blending these raw materials to form a powdered substance.

Here are some commonly available grades of Cements:

1. OPC-53 Grade Cement:

OPC-53 Grade Cement is a type of Ordinary Portland Cement with a compressive strength of 53 MPa (MegaPascals). It is known for its high strength and is suitable for construction projects that require strong and durable structures. OPC-53 Grade Cement is commonly used in the construction of bridges, high-rise buildings, dams, and other heavy-duty structures.

2. OPC-43 Grade Cement:

OPC-43 Grade Cement is another type of Ordinary Portland Cement with a compressive strength of 43 MPa. It is widely used in general construction works where high strength is not the primary requirement. OPC-43 Grade Cement is suitable for applications such as residential buildings, commercial complexes, and small-scale infrastructure projects.

3. PPC Cement:

PPC (Portland Pozzolana Cement) is a type of blended cement that contains pozzolanic materials such as fly ash, volcanic ash, or silica fumes along with Ordinary Portland Cement. The addition of pozzolanic materials enhances the workability, durability, and sustainability of the cement. PPC Cement is commonly used in various construction applications, including residential, commercial, and infrastructure projects.

VARDAN ENTERPRISE is proud to offer an extensive range of Cement products renowned for their reliability and high-quality. We understand that choosing the right cement is crucial for the success of any project, which is why we have carefully selected leading brands in the market to ensure customer satisfaction.
